

Using the Pages eBook template

This template was created to help you to easily lay out an ebook from your blog content ([more about that in this post](#))!

All you need to do is duplicate the .pages file and start editing the content, replacing all of the filler text with your own. Make sure you install the fonts in this folder too.

Use the text styles shown in the screenshot above the style your text as you add to your book. [Click here](#) for an introduction to using text styles in Pages, and editing them to change the colors and fonts if you wish.

The contents page will automatically update based on the text you style as 'Chapter Name' and 'Chapter subtitle'. Magic huh?

Happy eBook creating!
